Fleet activity
Rent-a-car

We are here to help you manage your rented vehicles more efficiently.

How we help

In an industry as intensive as rent-a-car industry, you need to ensure the maximization of each task throughout the rental process of a vehicle, and a fleet management solution like Frotcom can be the answer to increase fleet efficiency and workforce productivity.

Implementing Frotcom's fleet management software, the information collected - automatically and in real time - from each vehicle of the fleet, contribute to better customer service and reduce operational costs.

Through APIs, the Frotcom solution can enrich the collection of information of the fleet. Information such as the real-time inventory of all the vehicle park or kilometers collection or fuel level will optimize processes at the time of opening and closing contracts.

Rent-a-car companies also need to make sure vehicles are used correctly by their customers. This includes usage inside predefined regions, driving behavior that is not harmful to the vehicle and collection of GPS data that can be used to prove to customers the validity of speeding fines or fines for other traffic violations.

Benefits

Better business planning
Provide a real-time inventory of all the vehicle park, when in the process of pick-up the best-suited vehicle.

Improve efficiency
During the vehicle drop-off process, it is possible to collect odometer (mileage) and fuel level information remotely.

Enhance customer satisfaction
Minimize customer dwell time when collecting or dropping off a vehicle by accessing the final information you need to close the contract.

Increase safety
Track the position in case of exception (theft or accident) to protect better the assets.

How it works

The tracking device registers the vehicle information and data is transmitted by GPRS to the Frotcom Data Center. Using a web browser, you may then access Frotcom's interface to track the vehicle.

Easy-to-use Frotcom's interface gives you greater control of your vehicles with the possibility to access real-time information:

Alarms

If you're vehicles are only allowed to run in a specific country or area, you can **configure zones** in Frotcom and be alerted each time a vehicle leaves that area.

You can see and configure **appointment alarms** to be set off when a rule (date, mileage or hour) is met. For instance, you can configure an alarm to warn you about the next inspections or insurance review.

Immobilization

It allows you to block a vehicle in case of theft or if the vehicle is not returned upon completion of the contract. For each vehicle, you will be given a unique code that will allow you to block and unblock through Frotcom's web interface or smartphone app.

Reports

You can immediately pinpoint issues for improvement receiving daily or weekly basis fleet reports by email.
You can choose from dozens of different report types that address all sorts of fleet-related activities. You will find summary reports that show you the fundamental information, as well as more specialized reports addressing specific issues.

API

Full integration with your back-office applications. By integrating Frotcom with your back-office software, you make sure that no one has to retype information, so you can keep your office employees executing other tasks where they can actually add more value to the business.
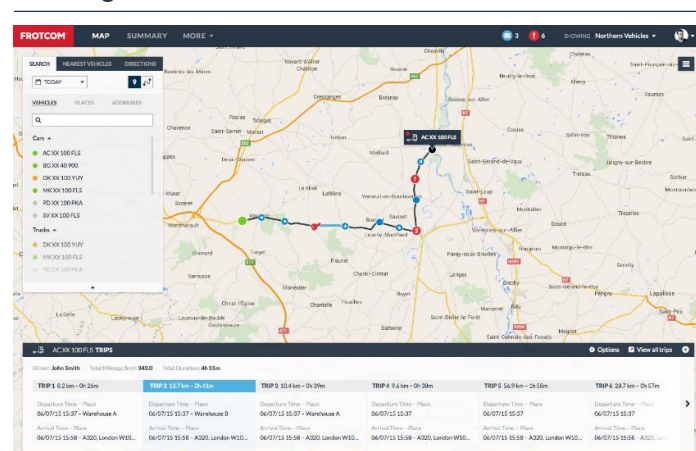

Frotcom GPS tracker

GB100 Series

Battery mounted telematics device allowing customer self-fit and lower cost installation.

• Compact size
• Easy installation
• Water resistance
• Low power consumption

Due to the high rotation of vehicles in the rent-a-car business, the GPS trackers used in these vehicles are usually easy to mount, to avoid high installation costs and vehicle downtimes.
